Detailed Contents

Preface xiii

About the Authors xvii

Introduction xix

PART 1. DATA COLLECTION AND EXPLORATION 1

Chapter 1. Getting Started With Statistical Analysis: Where Do I Obtain Data, and How Do I Prepare Data for Statistical Analysis? 5

Where Data Come From 6

Primary Data Analysis 6

Secondary Data Analysis 8

Preparing Data for Analysis 16

Cases: How Do I Define a Unit of Analysis? 17

How Do I Use Variables and Values to Describe a Case? 17

Are There Rules I Should Use for Naming Variables? 19

What Is Data Coding? 19

What About Open-Ended Response Choices? How Are These Coded? 21

How Do I Code Open-Ended Questions? 23

What Are the Basic Guidelines of Data Organization? 25

How Do I Define and Code Missing Data? 27

How Do I Code Nonspecific Responses? 29

How Do I Deal With Blanks and Zeros? 30

A Detailed Example of Data Organization and Coding 31

The Questionnaire 32

The Codebook 35

Chapter 2. How Do I Examine Data Prior to Analysis? 41

When Should I Screen Data? 41

How Do I Display My Data Visually? 47

What Is a Box and Whisker Plot? 49
What Is a Stem-and-Leaf Diagram? 49
What Is a Normal Distribution? 51
How Do I Prepare to Analyze Categorical Data? 53
How Do I Examine Two Variables at the Same Time? 55
How Do I Use a Crosstabulation to Examine Categorical Variables? 55
How Do I Use a Scatterplot to Examine Continuously Distributed Bivariate Data? 59
How Do I Display Bivariate Data if the Independent Variable Is Categorical and the Dependent Variable Continuous? 61
Simple Bar Chart for Means 62
Summary 63

PART 2. THE LOGIC OF STATISTICAL ANALYSIS: ISSUES REGARDING THE NATURE OF STATISTICS AND STATISTICAL TESTS 65

Chapter 3. Traditional Approaches to Statistical Analysis and the Logic of Statistical Inference 67
What Is the Difference Between Descriptive and Inferential Statistics? 68
What Is a Statistical Generalization? 69
What Do We Mean by "Sampling Error"? 70
What Are Sampling Distributions? 71
Some Examples: Sampling Distributions Based on Samples of Different Sizes 72
What Is a Confidence Interval? 74
What Is a Hypothesis Test? 77

Chapter 4. Rethinking Traditional Paradigms: Power, Effect Size, and Hypothesis-Testing Alternatives 81
What Is the Difference Between Statistical and Substantive Significance? 82
What Is Statistical Power? 85
Binomial Effect Size Displays 97
An Example Using Odds Ratios 99
What Are the Relationships Among Sample Size, Sampling Error, Effect Size, and Power? 102
Confidence Intervals Revisited 102
What Are the Problems With Statistical Significance Testing? 105
Has Significance Testing Outlived Its Usefulness? 110

Chapter 5. What Are the Assumptions of Statistical Testing? 119
What Are the Assumptions Related to Characteristics of Population Distributions? 123
What Are Normality and Multivariate Normality? 123
Is the Distribution Normal? 124
How Do I Examine Data for Bivariate and Multivariate Normality? 129
What Is Homoscedasticity? 133
What Are the Assumptions About Error or Disturbance Terms? 138
What Are the Assumptions About the Sample? 140
How Important Are Random Samples? 140
How Do I Calculate an Appropriate Sample Size? 143
A Reconsideration of the Sample Size Issue 144
What Is Independence of Observations? 146
What Are the Assumptions About Measurement? 147
What Is Measurement Error? 149
Explicit Recognition of the "Measurement Model" 150
What Are the Assumptions About the Statistical Model? 151
When Should I Be Concerned About Meeting the Assumptions of a Test? 153

Chapter 6. An Introduction to Statistical Models: Explaining Relationship Patterns 155
Our Notation System 156
Modeling Three-Variable Relationships 159
1. The Full Mediation Model (The Intervening Effects Explanation) 159
2. The Spurious Explanation 160
3. The Joint Effects Explanation 162
4. The Interaction Effect or Moderation Explanation 162
5. The Suppressor Variable Explanation 163
Summary: Patterns of Relationships and Their Explanations 164
When Do I Control Variables? 164
An Example of Model Building 166
Step 1: Model Representing the First Hypothesis 166
Step 2: Modification of the Model to Include Hypothesis 3 167
Step 3: Modification of the Model to Include Hypothesis 4 167
Step 4: Modification of the Model to Include Hypothesis 5 168

Chapter 7. How Do I Select the Appropriate Statistical Test? **171**
Am I Comparing Groups or Examining Relationships? 171
When Should I Use Multivariate Analysis? 172
How Do I Select the Appropriate Statistical Test? 175
Major Research Questions Suggested by the Four Design Frameworks 176
Statistical Analyses Suggested by Each Design Framework 176
Design 1 176
Design 2 177
Design 3 178
Design 4 178
Describing the Techniques 179

PART 3. ISSUES RELATED TO VARIABLES AND THEIR DISTRIBUTION **185**

Chapter 8: How Do I Deal With Missing Values, Outliers, and Non-normality? **189**
How Do I Deal With Missing Values? 189
Three Patterns of Missing Data: MAR, MCAR, and MNAR 191
Adjusting for MCAR Data 193
Adjusting for Missing, Non-MCAR Data 193
Case Deletion 193
Imputation 194
Regression 195
Adjusting for Missing Outcomes Due to Participant Attrition 195
Maximum Likelihood Methods 196
Multiple Imputation Methods 197
Adjusting for Missing Values: Summary 198
How Do I Control or Adjust for Outliers? 199
Identifying Outliers 199
Univariate Distributions 199
Bivariate and Multivariate Distributions 202
Adjusting Data for Outliers 203
How Do I Adjust for Non-normal Data? 204
Data Transformation 205
Power Transformations 205
Limitations of Data Transformation 209

Chapter 9. Types of Variables and Their Treatment in Statistical Analysis 213
How Do I Determine Whether a Parametric or Nonparametric Test Is Best? 214
Parametric Tests and Their Nonparametric Alternatives 218
What Are Dummy Variables, and How Do I Code Them? 221
When, If Ever, Should I Dichotomize a Continuous Variable? 227
Recommendations 230

PART 4. UNDERSTANDING THE BIG TWO: MAJOR QUESTIONS ABOUT ANALYSIS OF VARIANCE AND REGRESSION ANALYSIS 231

Chapter 10. Questions About Analysis of Variance 235
What Are the Nuts and Bolts of Analysis of Variance? 236
What Is an Interaction Effect, and How Do I Interpret It? 242
What Are the Issues in the Interpretation of Interaction? 246
Recommendations 246
How Do I Select the Best Method for Analyzing the Pretest-Posttest Design? 252
What Is an Analysis of Covariance? 253
Recommendations 260
What Are Planned and Post Hoc Comparisons? 262
What Are Planned and A Priori Contrasts? 263
What Are Post Hoc and A Posteriori Tests? 265
Recommendations 266
How Do I Control for Familywise Error? 268
What Are Familywise Error Rates? 269
Recommendations 270
When Should I Use MANOVA? 272
What Is the Distinction Between a MANOVA and an ANOVA? 273
Recommendations 275

Chapter 11. Questions About Multiple Regression Analysis 281
What Are the Nuts and Bolts of Multiple Regression Analysis? 281
How Do I Determine the Appropriate Number of Subjects and Predictor Variables? 284
What Are Stepwise and Hierarchical Multiple Regression Procedures, and When Should I Use Each? 287
Describing Relationships Between Independent and Dependent Variables 287

Predicting the Value of the Dependent Variable 287
Testing a Theoretical Model 289
A Detailed Example: The Effect of Age and Education on Income 291
What Are Regression Coefficients, and How Do I Interpret Them? 297
How Do I Interpret Bivariate Correlation Coefficients? 298
How Do I Interpret Multiple Correlations? 300
What Are Unstandardized and Standardized Regression Coefficients? 302
How Do I Interpret Partial and Semipartial Correlations? 304
Partitioning of Variability for Bivariate Squared Correlations (r^2) 305
Partitioning of Variability for Semipartial Squared Correlations (r^2) 305
Partitioning of Variability for Partial Squared Correlations 306
How Do I Interpret an Interaction Effect? 307

Chapter 12. The Bigger Picture **315**
How Do I Understand the Relationships Among the Different Statistical Techniques? 315
When Should I Use Meta-Analysis? 319
The Pros and Cons of Meta-Analysis 324
An Example of Meta-Analysis 326
What Are Modern Robust Statistics? 330
Ten Tips for Success in Statistical Analysis 332
1. Get Comfortable With Your Data 332
2. Thoroughly Explore Your Data, Twice! 333
3. Sometimes Pictures Speak Louder Than Words 334
4. Replication Is Underemphasized and Overdue 334
5. Remember the Distinction Between Statistical Significance and Substantive Significance 335
6. Remember the Distinction Between Statistical Significance and Effect Size 335
7. Statistics Do Not Speak for Themselves 336
8. Keep It Simple When Possible 336
9. Use Consultants 336
10. Don't Be Too Hard on Yourself 337
